CPU Scheduling Algorithms & Deadlock Banker's Protocol

Mathematical problems and Gantt charts for FCFS, Shortest Job First, Round Robin, Coffman deadlock conditions, and Banker's safety algorithm.

---

1. CPU Scheduling Metrics & Algorithms

Scheduling criteria evaluate CPU utilization, throughput, turnaround time, waiting time, and response time. Preemptive algorithms include Shortest Remaining Time First (SRTF) and Round Robin (RR).

2. Deadlock Coffman Conditions & Banker's Algorithm

Deadlock requires: Mutual Exclusion, Hold and Wait, No Preemption, and Circular Wait. Banker's Algorithm ensures resource allocations only transition between safe states.
