## 1. Diagnostic Criteria & Glycemic Targets

Diabetes mellitus is diagnosed when: Fasting Plasma Glucose >= 126 mg/dL (7.0 mmol/L), 2-hour post 75g OGTT >= 200 mg/dL, HbA1c >= 6.5%, or classic symptoms with random glucose >= 200 mg/dL.

## 2. Pharmacological Armamentarium

Metformin remains the foundational first-line agent. SGLT2 inhibitors (Empagliflozin, Dapagliflozin) provide established cardio-renal protection, while GLP-1 receptor agonists promote weight reduction.
